Frederick R. Treyz, Ph.D. is the Chief Executive Officer and Chief Economist at Regional Economic Models, Inc. (REMI), a leading provider of dynamic economic modeling software and consulting. He is an authority on the macroeconomic and demographic effects of policy changes on states and regions.

Under Dr. Treyz's leadership, REMI has shaped public policy debates by helping clients evaluate economic development, energy, immigration reform, healthcare policy, and other topics. The company's clients include federal, state, and regional agencies, leading national associations, metropolitan planning organizations, universities, and consultants who seek to analyze the implications of public policy.

Dr. Treyz has overseen the research and development of REMI's suite of regional policy models, and has academic publications in leading journals. He holds an A.B. in Economics from Princeton University and a Ph.D. in Regional Science from the University of Pennsylvania

Michael Simmons has served as the County Economist for Mecklenburg since 2016, providing revenue and expenditure forecasting, economic impact analysis for new businesses relocating to the area, and general economic advisement services for County officials. He has six years' experience using REMI PI+ software and has successfully utilized the program to determine appropriate levels of grant funding for new businesses as well as modeling several policy analysis studies concerning Mecklenburg County.
